

MVP

A sample data was selected from the instacart online data. The sample data is the last 98,577 rows of the 3 million orders. It contains orders made by 9,328 customers and 98,577 products.

The result of the analysis for which day has the most number of orders is plotted using Tableau. And from this analysis, Sunday has the highest number of orders but the other days of the week have almost the same amount of orders.

The total number of orders per day
